(54) PACKAGE OF RESILIENT YARN

(57)Abstract:

PURPOSE: To prevent a yarn from slipping off at the time of handling and yarn unwinding on the outermost layer, and preclude yarn severance at the time of unwinding.

CONSTITUTION: In a resilient yarn package according to the invention, the form of the fiber cross-section is composed of a central portion A and 3-8 segments B each joined with the portion A independently with the junction of the A and B assuming a neck to present a multifold section, wherein the tab of the package has shifted toward the center of the winding width, and at least partially they are overlapping. Accordingly slipping-off of the yarn is checked. Further, the inter-yarn friction will not increase because of this special section form, and the unwinding property is good.
